Re: Recall Campaign
Front brake lines
2006-2008 BMW R1200 R, R1200 GS, R1200 ST

Dear Mr. Smith:

This notice is sent to you in accordance with the requirements of the National Traffic and Motor Vehicle Safety Act of 1966 and 49 CFR Part 573.

Pursuant to Section 573.6(c) of the above, we submit the following information.

1. Manufacturer: Bayerische Motoren Werke AG (BMW AG)
Designated Agent: BMW of North America, LLC
Woodcliff Lake, New Jersey 07677
2. Make: BMW
Model Year / Model: 2007-2008 / R1200 R
2006-2007 / R1200 GS
2007 / R1200 ST

Inclusive Dates of Manufacture:

R1200 R	(Aug 30, 2006 – Feb 5, 2008)
R1200 GS	(Jul 06, 2006 – Jul 6, 2007)
R1200 ST	(Jan 30, 2007 – Jun 15, 2007)

3. The number of motorcycles containing the problem is approximately 1,195 R1200 R, 28 R1200 ST and 2,025 R1200 GS models.
4. The percentage of motorcycles estimated to actually contain the problem is 100%.
5. The problem involves the front brake lines. Due to the current routing of the front brake lines, it is possible that during riding, and therefore associated vibration, the brake lines could be under strain. If the vibration/strain is significant, the brake lines could split and start to develop a leak. If the leak became significant, brake fluid could escape. If this happened, the level of fluid in the reservoir of the front brake system could drop. If this goes unnoticed, and the brake fluid level drops significantly, the front brakes could fail. However, the rear brakes are available and are capable of slowing and stopping the motorcycle.

Recall Campaign No. 08V-xxx, R1200 R, R1200 GS, R1200 ST
Front brake lines

Dear BMW Owner:

This notice is sent to you in accordance with the requirements of the National Traffic and Motor Vehicle Safety Act.

BMW AG has decided that a defect which relates to motor vehicle safety exists in certain 2008 BMW R1200 R, R1200 GS and R1200 GS Adventure motorcycles. Our records indicate that you are the owner of a potentially affected motorcycle.

We sincerely apologize for any inconvenience this may cause you.

DESCRIPTION OF DEFECT

The problem involves the front brake lines. Due to the shape of the front brake lines, it is possible that during riding and related vibration, the brake lines could be under strain. If the vibration is severe, a split could develop in the lines, and a leak could start to occur. If the leak became significant, and the level of brake fluid in the reservoir dropped significantly, the front brakes could fail. However, the rear brakes are available and are capable of slowing and stopping the motorcycle.

You must have this problem corrected immediately. Failure to observe the following precautions, in conjunction with traffic and road conditions, and the rider's reactions, could increase the risk of a crash.

PRECAUTIONS FOR YOUR SAFETY
